

Problem 4

- Run the image httpd again without attaching any volumes

```
reem@reem-host:~$ docker run -d --name apache httpd
87262ef2de84707b813c6a2fdb748b5744166f735d980244946d83ff527c7233
```

- Add html static files to the container and make sure they are accessible

```
reem@reem-host:~$ docker cp /home/reem/myhtml/index.html apache:/usr/local/apache2/htdocs
Successfully copied 2.56kB to apache:/usr/local/apache2/htdocs
```

- Commit the container with image name **IMAGE_NAME**

```
reem@reem-host:~$ docker commit 87262ef2de84 reem
sha256:36d85e13fa41fe0e304681cca9278e0da1e760ee85932d207e7e815d244c7044
```

- Create a dockerfile for the previous image and build the image from this dockerfile

```
reem@reem-host:~$ nano Dockerfile
```
